RE: Initial visit summary for Sally Newpatient

Dear Dr. Doogie Howser:

Thank you for your referral of Sally Newpatient, who presented to my office on 6/11/2017 with cervical spine and elbow related symptoms. Here is a brief summary of their initial visit.

The history & physical revealed findings consistent with a diagnosis of Cervical Disc Lesion and Lateral Epicondylopathy.

My treatment recommendations include joint manipulation, therapy modalities, myofascial release, therapeutic exercise and traction.

The patient will be treated 3 times per week for 2 weeks at which point I would expect in excess of 25% improvement.

I will provide you with updates on the progress of your patient. If you would like any additional information, please do not hesitate to contact my office. Once again, thank you for allowing me to participate in the care of your patient.

Sincerely,

Dr. Tom Test
